

NE 24, Section 2, Fall 2004

The Scientists of the Manhattan Project, their Contributions to President Eisenhower's Atoms for Peace Initiative and their Lasting Legacy to Nuclear Power in the 21st Century

Schedule: F11:00-12:00, 3105 Etcheverry Hall

Professor: Brian D. Wirth, 4165 Etcheverry Hall

Office hours: TTh 10-11

phone: 642-5341, e-mail: bdwirth@nuc.berkeley.edu

Course website: <http://iron.nuc.berkeley.edu/~bdwirth/Public/NE24/ne24.html>

Course description: The discovery of the neutron in 1932 by James Chadwick, the 1932 experiment by John Cockroft and Ernest Walton that confirmed Albert Einstein's postulate from the theory of relativity about the equivalence between mass and energy ($E=mc^2$), and the subsequent discovery of fission in 1938 revolutionized atomic and nuclear physics. During World War II, the United States established The Manhattan Project, which brought together many of the world's preeminent scientists and engineers under the leadership of J. Robert Oppenheimer with the goal of building a new and more explosive weapon based on these discoveries. The world entered the nuclear age with the explosion of the atomic bomb at Trinity, N.M. on 16 July 1945 and less than a decade later, U.S. President Dwight D. Eisenhower provided his vision for the peaceful use of atomic energy in a speech to the United Nation's on December 8, 1953 entitled, 'Atoms for Peace'.

This course will cover the history of the scientists and engineers who participated in the Manhattan Project and their contributions to nuclear science and technology, within the context of President Eisenhower's 1953 address and nuclear power in the 21st Century. Students in the course will be expected to perform a research report on an individual scientist or engineer from the Manhattan project and his/her contributions to nuclear energy.

Grading: Satisfactory or Unsatisfactory

Term Project (Oral presentation and written report): 100%

Textbooks: Richard Rhodes "The making of the atomic bomb", Touchstone, NY, 1988.

NE 24 - (Tentative) Course Outline

Date	Discussion topic
Sept 3, 2004	Introduction and class objectives
Sept 10, 2004	NO CLASS
Sept 17, 2004	Scientific discovery in the atomic age
Sept 24, 2004	Scientific discovery in the atomic age
Oct 1, 2004	Guest lecture (Professor Hoffman), Glenn Seaborg
Oct 8, 2004	Manhattan Project Overview
Oct 15, 2004	Chicago Pile, Enrico Fermi and Eugene Wigner
Oct 22, 2004	Engineering Challenges in the Manhattan Project
Oct 29, 2004	President Eisenhower's "Atoms for Peace" speech
Nov 5, 2004	Student presentations
Nov 12, 2004	Student presentations
Nov 19, 2004	Student presentations
Nov 26, 2004	Thanksgiving holiday, NO CLASS
Dec 3, 2004	Student presentations
Dec 10, 2004	Student presentations

Possible term projects:

- Admiral Rickover and the development of Naval Reactors
- Earnest Lawrence and the development of the cyclotron
- Atomic Energy Commission creation and history
- Edward Teller and the "Little Red Schoolhouse" workshop, 1956 (safe reactor designs)
- Oak Ridge National Laboratory, creation and legacy
- ...
